## Onsite Energy Program Technical Assistance for Clean Energy

The U.S. Department of Energy's (DOE) Onsite Energy Technical Assistance Partnerships (TAPs) help industrial and other large energy users transition to clean energy, lower costs, reduce emissions, and contribute to a clean energy economy.

### What is Onsite Energy?

Onsite energy is energy generated at the location where it is used. It can be produced from a variety of sources, including fossil fuels, renewable energy, and nuclear power. Onsite energy can be used for a wide range of applications, from residential heating and cooling to industrial manufacturing and power generation.

Onsite energy can be used for a wide range of applications, from residential heating and cooling to industrial manufacturing and power generation.

To meet the evolving needs in the industrial sector, the U.S. Department of Energy's Industrial Efficiency and Decarbonization Office is initiating a broader Technical Assistance Partnership (TAP) program, based on the successful model of the existing Combined Heat and Power TAPs, with the goal of providing similar services for a broader set of technologies through a new Onsite Energy Program.
